

Temperatures

School administrators, teachers, coaches, and intramural supervisors must be familiar with and implement their school division's temperature policy for cold and hot weather. When conducting outdoor physical activities reference your school division's:

- Temperatures that are safe for students to be physically active outdoors.
- Temperatures that are unsafe for students to be physically active outdoors.
- Temperatures that require accommodations for student safety when physically active outdoors.

Note: Specific temperatures (hot or cold) are not provided in the Manitoba Physical Activity Safety in Schools because there isn't a consistent safe/unsafe temperature for outdoor physical activity across Manitoba school divisions. Teachers should follow their school division's temperature policies for outside activities.
